MTH 075 APPLIED GEOMETRY
INDIVIDUALIZED STUDY

Mth 075: Applied Geometry

Textbook: A Review of Geometry
by Richard Aufmann, Vernon Barker and Joanne Lockwood

Equipment: A basic calculator with a square root key and a protractor are required for this course.

Web Address: http://newterra.chemeketa.edu/faculty/mathcenter/

Class Procedures:

A. Introduction -

1. This course will take place in the Mathematics Learning Center. You are expected to schedule your time in the learning center.

2. You will receive individual help from the instructor and lab assistant on the use of the materials, as well as the content involved. However, your individual initiative and maturity will make this approach successful.

3. The course is divided into three modules and each module contains several sections. You will receive a study guide for each module indicating the pages to study, assignments, and tests.

4. You can complete the course at any time during the term. If necessary, an incomplete will be given at the end of the term if you successfully complete the first two modules.

B. Assignments -

1. You will determine your own pace through each module by following the study guides and completing an assignment for each section.

2. The homework assignments are self-checked using the answer key in the MLC. Rework any problems missed. Discuss any difficulties with an instructor. Continue with the next assignment after all corrections are made and all questions are answered. No homework is accepted for a module until the previous module tests are completed.

3. The review assignments are checked by an instructor. Rework any problems missed. Discuss any difficulties you have with an instructor. Full credit may be earned when you get all the problems correct.
C. Tests -

1. There will be a test at the end of each module that is taken whenever you successfully finish the assignments on that module. You have a maximum of two attempts on each module test. Retesting is optional. A different version of the test is used for the retest. The decision to retest must be made before taking the next module test.

2. If a retest is taken, your test grade for that module will then be determined by averaging the two test results. It is therefore important that you are ready to be evaluated on each module before taking the first test.

D. Evaluation -

1. Section assignments - 10 @ 1 point 10 points
   Review assignments - 3 @ 5 points 15 points
   Module tests - 3 @ 100 points 300 points
   Total 325 points

Final grades are determined from a percentage of total points out of the 325 points possible.

2. Final grades are determined using the following scale. Percentages are calculated out of the total points possible.

   A  90 - 100%
   B  80 - 89%
   C  70 - 79%
   D  60 - 69%
   F  0-59%
   IF some essential requirement of the course has not been completed (see #3, below)

3. To receive an Incomplete (IF) you must be passing the course, and you must request it, in person, from your instructor. Incompletes are given at your instructor’s discretion and additional time is granted for completion of the coursework. Consideration is given to the students’ timeliness, i.e. work is turned in on schedule (see Due Dates) and, throughout the term, the student is spending enough time in class to show significant effort toward completion of the course.

   4. You may remove an incomplete from your record by completing course requirements. Your instructor will provide you with a “Notice of Incomplete Status in a Course” form, which specifies the length of additional time allowed to complete the course material. For more detail on college incomplete policy see “Grading System” in the college catalog.

E. Academic Honesty

If a student is caught cheating, the first offense will result in a score of zero on the test with no retake possible and the incident will be reported to the dean of students. A second offense will result in a failure grade (F) in the course and the incident will be reported to the dean of students.
